CATALOG 2006

1 The FRONTpart is a hi-tech white badge with patented colour-changing technology built in!

4 The colour change is a gradual process that cannot be reversed

2 The BACKpart is preprinted with time-release ink (7.6cm x 7.6cm Clip-on BACKpart shown)

3 When the FRONTpart is applied to the BACKpart, the technology takes over and the expiration process begins

TIMEbadge Expiring ID Technology

A patented TEMPbadge Expiring ID is better than any ordinary temporary ID badge because it changes colour when a visitor's badge is no longer valid. Each TIMEbadge ID consists of a specially coated white adhesive FRONTpart and a BACKpart that is pre-printed with time-release ink. Once the FRONTpart is applied to the BACKpart, the TIMEbadge ID is activated. The result is a gradual colour change that signals expiration when completed.

The Expiration Process

Depending on the expiration period you choose, the TIMEbadge ID will remain white for the majority of that time before the colour change begins. For example, a One-Day TIMEbadge Expiring ID issued in the morning will reveal light pink bars by late afternoon, and darker pink bars within 1 day, signaling an unmistakable visual expiration.

The TIMEbadge Expiring ID is not affected by light, so the expiration process works indoors and outdoors, day or night.

Expiration Time Frames

- Half-Day
- One-Day
- One-Week
- One-Month

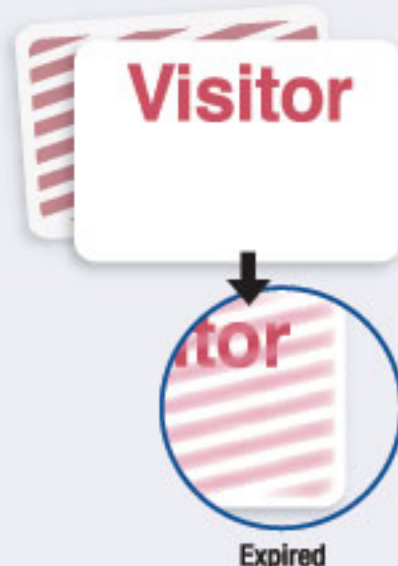

TEMPbadge ID Products—Any other badge is just a label!
